

ANCLORA IMPULSO · RELEASE CERTIFICATION

Final Blocker Closure Production Smoke + UX Re-audit

PASS_WITH_JUSTIFIED_EXTERNAL_GAPS

Fecha	2026-09-15
Audited head	e398bffa1e4dddfd3ec6149c35a7d9f7109182c7
Producción	https://impulso.anclora.com
Fixture	d050f812-ce9d-4224-8393-918e62747e42
Skill	ux-product-experience-review contract 1.5.0 / manifest 1.4.0

Decisión: el smoke real del workout sintético pasa review, ejecución, descanso, navegación, salida, reanudación y finalización. AX ya no muestra fallos críticos/serios de nombres. Quedan gaps externos o de tooling documentados.

00 · Index and gate

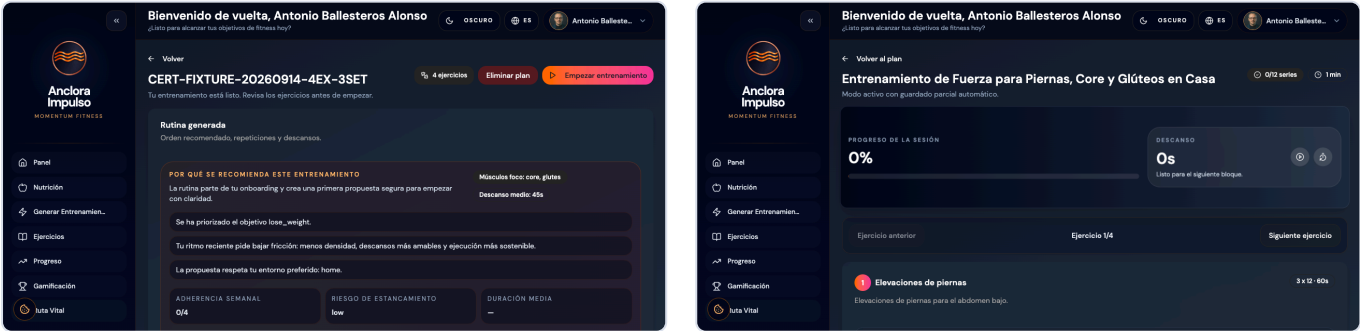

Closed - safe fixture - production workout smoke - UX-03 accessible names - responsive workout matrix - Vercel production promotion	Non-blocking gaps - fixture deletion after rate-limit window - axe gradient contrast heuristic - one landmark best-practice warning - no modal surfaced in exact smoke
---	--

01 · Release gates

Gate	Result	Evidence
Fixture	PASS	4 synthetic exercises × 3 sets; account-scoped; no public test endpoint.
Auth/API/CORS	PASS	Production login and critical calls 200/201; OPTIONS 204.
Workout	PASS	Review → start → 12 sets → rest → exit/resume → complete → Progress.
Accessibility	PASS with tool gaps	Contextual AX names for exercise/set/field; no critical/serious violations.
Responsive	PASS	Seven required viewports represented; no horizontal overflow.
Findings	0 Critical / 0 High	UX-01 is Medium; UX-03 resolved.

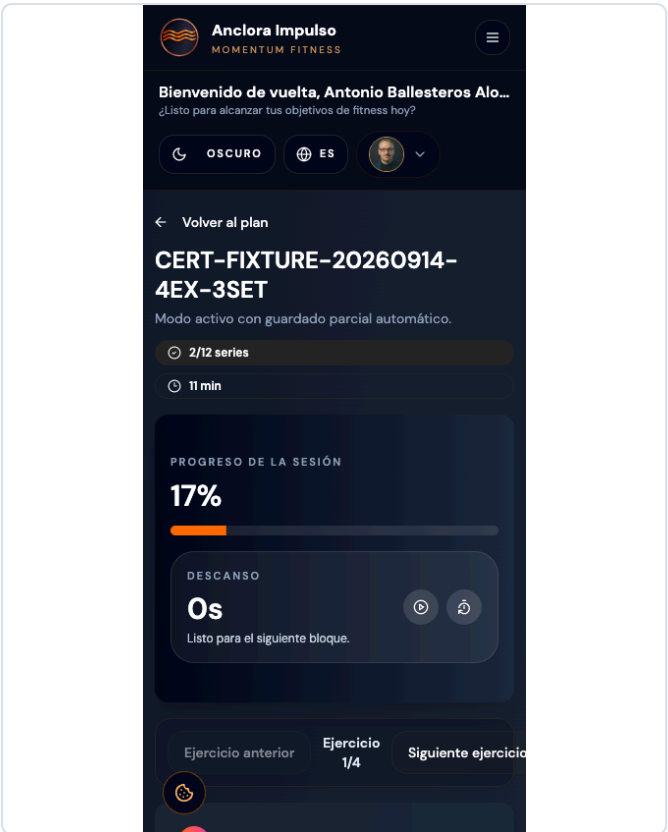

02 · Fixture and workout evidence

The synthetic fixture was created through the authenticated API, used only by the authorized test account, and never exposed publicly. Browser evidence covered current exercise/set state, completed-set transitions, rest timer, previous/next semantics, synthetic notes, safe exit, resume persistence and completion.

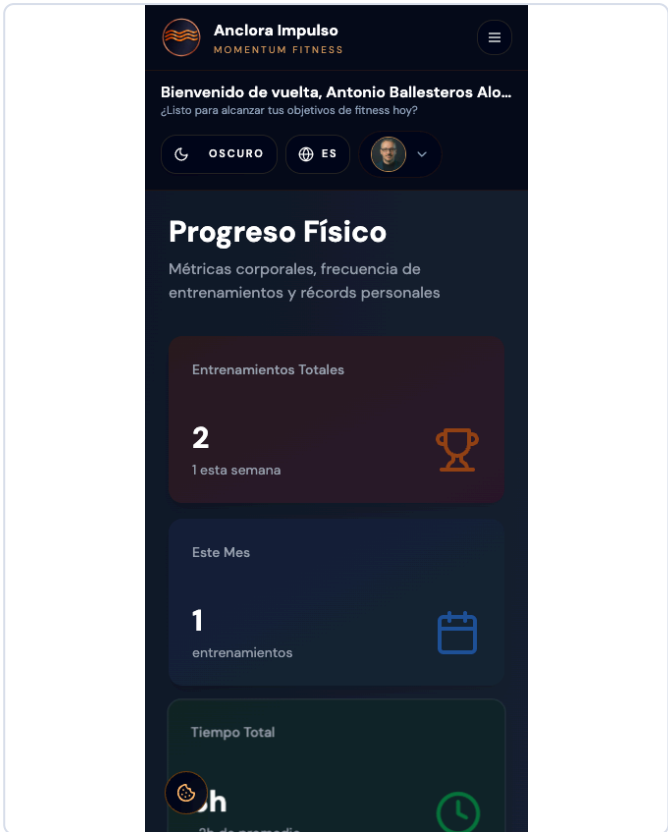

E-C02 · Review, production, 1440×900, ES.

E-C03 · Start state, production, 1440×900, ES.

E-C08 · Mobile execution, 390×844, ES.

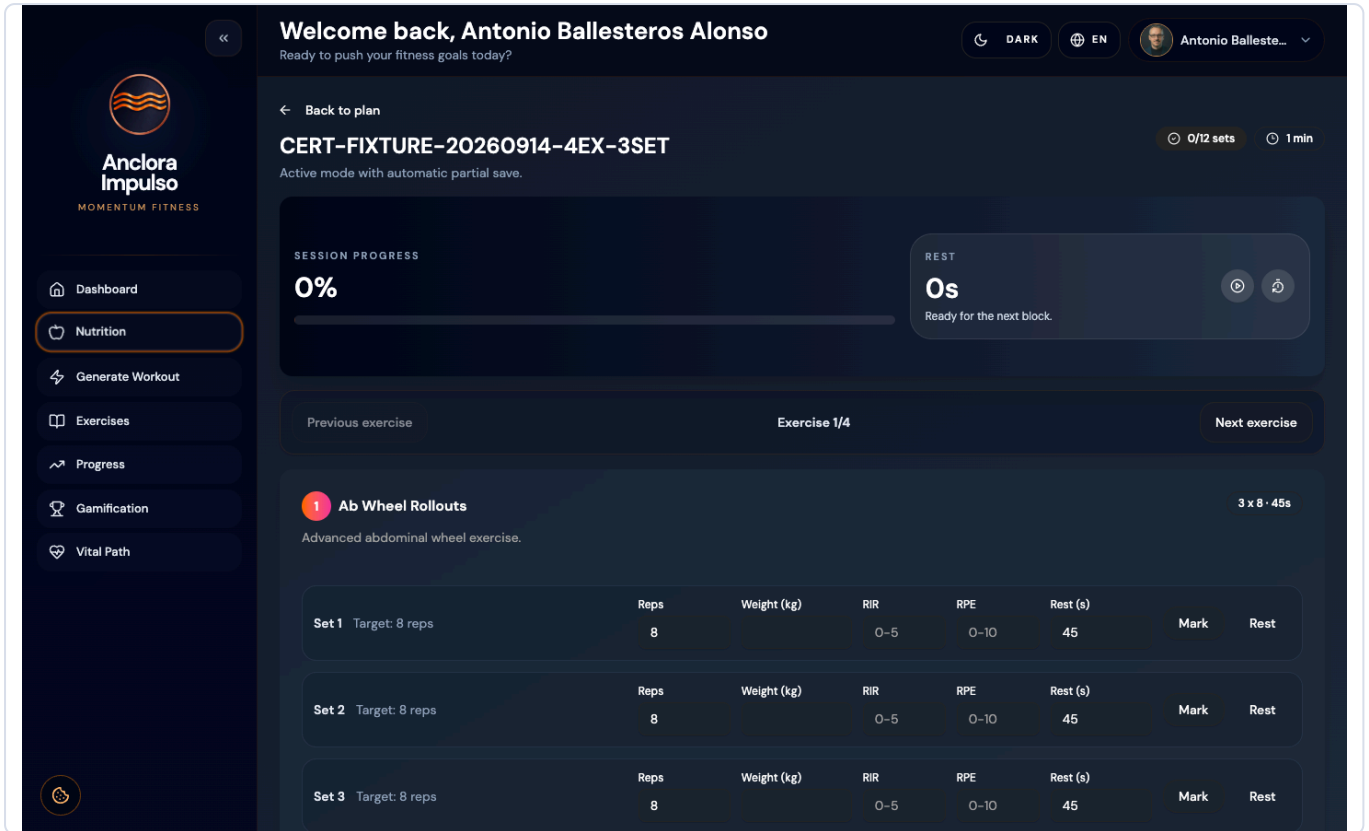

E-C12 · Completion return to Progress, 390×844, ES.

03 · UX-01 / UX-02 / UX-03

ID	Current result	Severity	Release
UX-01	Focused current exercise, explicit next/previous, visible progress; three-set vertical scroll remains.	MEDIUM	Non-blocking
UX-02	Mobile shell remains hamburger-first; workout controls themselves remain reachable.	MEDIUM	Non-blocking
UX-03	AX tree distinguishes exercise, set and field type for reps, weight, RIR, RPE and rest.	RESOLVED / LOW	Closed

04 · Accessibility and keyboard

The final deployed DOM exposes “Expandir sidebar”, a named account trigger, contextual set buttons and labelled session progress. Keyboard traversal reached shell links with visible focus; set controls are reachable after scroll. Axe returned zero critical/serious violations on the loaded workout page. The remaining contrast result is incomplete because the tool cannot resolve the gradient background; the remaining region warning is moderate best-practice. No exit modal was surfaced, so no modal behavior was invented.

E-C04 · Desktop workout, EN/dark, with named controls.

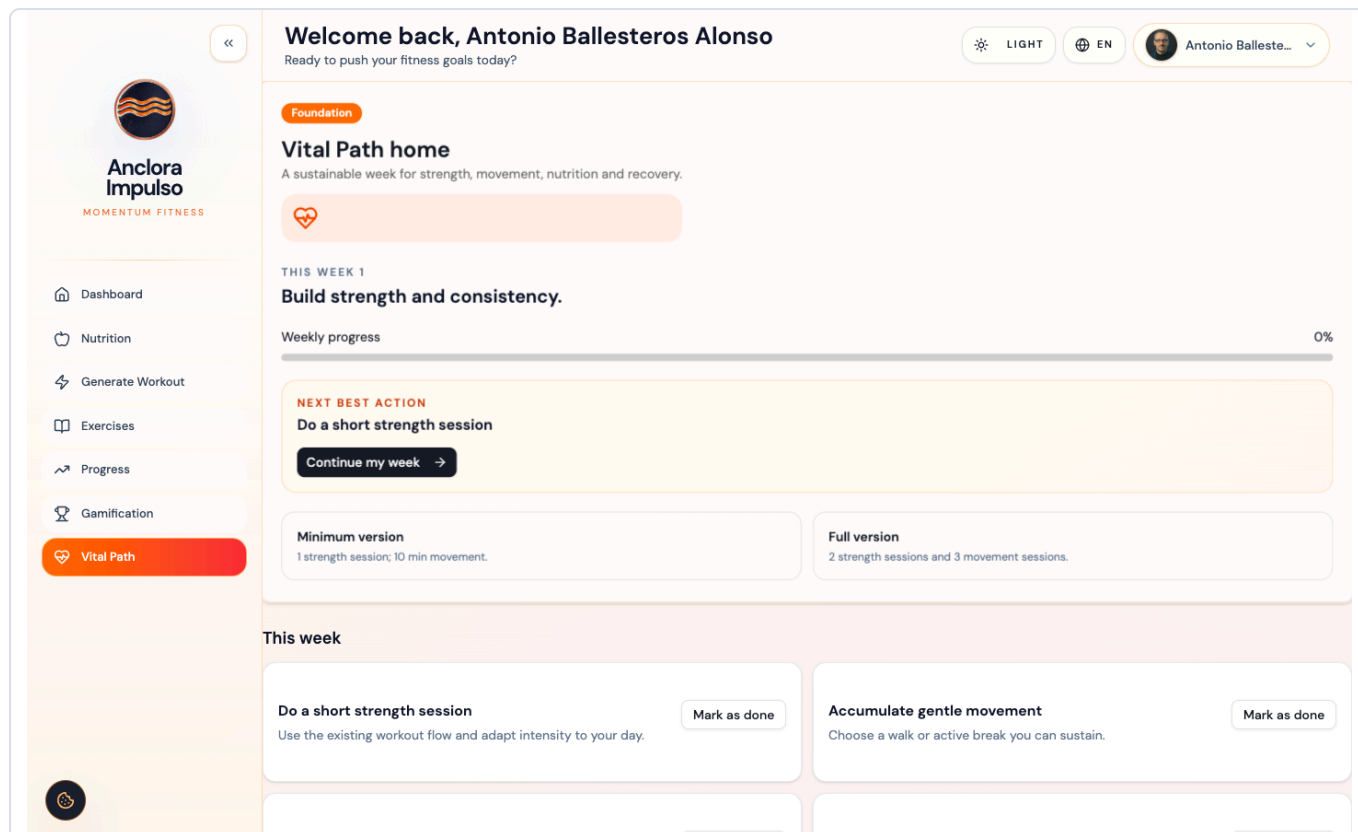

05 · Responsive matrix

Surface	1920×1080	1440×900	1366×768	1024×768	768×1024	430×932	390×844
Workout execution	PASS	PASS	PASS	PASS	PASS	PASS	PASS
Dashboard	—	PASS	—	—	PASS	PASS	PASS
Health Plans	—	PASS	—	—	PASS	PASS	PASS
Progress / Nutrition / Exercises	—	PASS	—	—	—	PASS	PASS
Auth	—	PASS reusable	—	—	—	PASS reusable	PASS reusable

All measured pages kept document width equal to viewport width. Workout vertical content is intentionally long at 390×844; the remaining opportunity is scroll reduction, not overflow.

06 · Ruta Vital, themes and locales

Production enrollment returned 201; onboarding returned 200; the home exposed Foundation/current week, Full Version, Minimum Version and one dominant next action. Existing Workout, Progress, Nutrition and Gamification routes returned 200 from the authenticated shell. Light/dark and ES/EN were observed on private Ruta Vital/workout surfaces; document language switched to `es` and `en`. Safety copy remained educational and non-clinical.

E-C16 · Ruta Vital, light theme, EN, 1440×900: weekly focus, full/minimum versions and next action.

07 · UX-01...UX-11 closure

ID	Current	Severity	Blocking
UX-01	PARTIALLY_RESOLVED	MEDIUM	NO
UX-02	STILL_PRESENT	MEDIUM	NO
UX-03	RESOLVED	LOW	NO
UX-04, UX-05, UX-06, UX-07, UX-08	STILL_PRESENT / PARTIAL / REFINED	MEDIUM	NO
UX-09	RESOLVED_READONLY	LOW	NO
UX-10, UX-11	STILL_PRESENT	LOW	NO

08 · Infrastructure and limitations

Vercel initially held the prior production target; the staged `e398bff` deployment was explicitly promoted and became `READY/PROMOTED`. Render's historical `/api/health/*` remains a legacy dead endpoint not called by production traffic. A later login retry hit Render rate limiting (429); cleanup was deferred rather than attempting an unsafe or unauthenticated delete. The fixture remains account-scoped and clearly named pending maintenance cleanup.

09 · Final comparative answer

Compared with the previous FAIL, the release is better. The requested safe workout evidence now exists, the real production workout completes, UX-03 is resolved from the AX tree, responsive workout coverage is complete, and no Critical/High finding remains. The highest-return follow-up is reducing mobile workout scroll while preserving contextual names, progress visibility and draft recovery.

FINAL_RELEASE_GATE: PASS_WITH_JUSTIFIED_EXTERNAL_GAPS

Only non-blocking tool/external gaps remain.

Evidence: docs/audits/evidence/ancora-impulso-final-blocker-closure-2026-09-14/ · Prior certification preserved in ancora-impulso-final-release-ux-reaudit-2026-09-14.*
